SALE ORDER

All Red Angus will sell at 1:00 p.m. in catalog order. Simmental cattle will follow approximately at 1:45 p.m. Sale order and supplement sheets will be posted on DVAAuction 12 hours before the sale.

DELIVERY

Delivery will be available at the least possible cost to the buyer. As always, we will continue to offer free delivery to CENTRAL POINTS in South

Dakota and North Dakota. For all other states, sellers will help arrange delivery, but costs may be up to the purchaser.

FEEDING ARRANGEMENTS

Ask about our sale day discount if you haul your bulls home on the day of the sale. All bulls can be kept until delivery or pickup around April 1st. After April 1st, the seller reserves the right to charge feed and bedding costs at a rate of \$4.00 per day.

RETAINED INTEREST

Consignors will retain 1/3 semen interest in all bulls and 1/2 embryo interest in any females sold unless otherwise noted.

SALE TERMS & CONDITIONS

All cattle will sell under terms and conditions adopted by the RAAA and the ASA. The full terms and conditions can be found online:

www.simmental.org/site/userimages/sale%20terms.pdf

redangus.org/wp-content/uploads/2024/12/Sale-Terms-and-Conditions.pdf

LIVESTOCK INSURANCE

The Sellers highly encourage each buyer to purchase mortality insurance on their purchases. For more information you can call or visit with Dakota Ag Insurance Jared Mohnen • 605-990-5355

EPD INFORMATION

In this catalog we have included data on the core performance traits. With the ever-expanding database predictions on more traits than ever before, we have had to narrow our EPD selection to these core items. If you would like additional information on any traits not listed, please let us know. The EPDs provided are current as of the date the catalog went to press. Real time data can be found on: www.RedAngus.org • www.simmental.org

ONLINE BIDDING

The sale will be broadcast live over the internet through DVAuction. To bid from your computer during the sale, complete this simple two step process: • Visit www.dvauction.com or call (402) 474-5557. Register by entering a User Name and Password. Enter your personal information on the next screen. • Click "Apply for Bidding." Select the Lazy J Bar Ranch / Schnabel Simmentals Sale from the list of sales and click "Apply." Complete the process by filling out the Banking and Lending information requested. DVAuction will contact you to let you know that you have been approved to bid and buy at the sale. We will assign you a buyer number after you have made a purchase on the sale through DVAuction. After the sale, Lazy J Bar Ranch or Schnabel Simmentals will contact you to make arrangements for payment and delivery of your purchases. Please Note: You must have high speed internet access (DSL, T-1, or Broadband) to bid during the sale. Any questions, please contact DVAuction at (402)-474-5557 or support@dvauction.com. We recommend that you register at least one day before the sale for online bidding.

TESTICLE MEASUREMENTS

Testicular size is an indicator of puberty in both bulls and females, so selecting bulls with larger scrotal circumference measurements will not only ensure you of a bull who can service more cows over a given period of time, but will also provide you with daughters who will cycle earlier.

Recommendations for Scrotal Circumference

MONTHS OF AGE	12-14	15-20	21-30	30+	
SCROTAL CM	35	37	39	49	Excellent
	30-35	31-37	32-39	33-40	Good
	30	31	32	33	Poor

GENOMICALLY ENHANCED EPDS

All the bulls of both breeds have been genetically profiled to enhance the accuracy of their EPDs, verify parentage and, on the Simmentals, determine polled status and color.

GGP

QR CODES

Using your cell phone, scan the QR code next to each lot to view their videos on DVAuction. Videos will be available the second week in February.

WELCOME

THE RIGHT CHOICE PRODUCTION SALE

Welcome to our 2026 production sale. What a year 2025 has been to be in the cattle business. It seems like every week we hear about another record price being broken. We had excellent moisture this summer which led to abundant hay, pasture, and crops. It's been a busy year between chasing the kids around throughout various sports seasons, 4-H activities, and managing all the cattle and crops. We are a family operation and all 4 of our kids are always out helping and growing a passion for the cattle.

It's hard to believe that I purchased my first Simmental females over 25 years ago and many of those still have an influence in our herd yet today. This spring we had the privilege to acquire the Bruce & Sandy Flittie herd, which I would guess 90% of our herd originates from, so they fit in perfectly. We are very proud and grateful for the opportunity to carry on what Bruce & Sandy have worked so hard to achieve throughout the years. As many of you know the Flittie cattle just flat out work and are built to last. We have focused very hard on having a strong maternal cow herd. We want cows that are functional and low input yet maintain proper body condition. I always say you can't build a house on a weak foundation and I feel that is the same for a cow herd, you need a solid foundation to develop cattle

that will be functional and marketable. We do NOT creep feed any of the calves, as we expect them to grow & excel with mother's milk and grass alone. Disposition is EXTREMELY important to us with the kids always helping with the cows.

The bulls are being fed similar rations that we have used for the last few years. Their rations have been developed to achieve maximum growth while keeping the bulls athletically sound and to have longevity. The ration this year is forage based using a combination of earlage, corn silage, ground oats hay, ground alfalfa hay, and 1.5 oz RIO backgrounder loose mineral. We are aiming for 3.25# ADG but they are currently eating only 24# as fed (12.6# DMI), we might sacrifice a little in ADG but feel we will have better longevity. All our feedstuffs are 100% homegrown. They also always have free choice salt and Rio Nutrition tubs. All cattle are on a strict herd health program put together with the Hosmer Vet Clinic (Dr. Holly Roe Johnson 605-283-2278) All bulls are DNA tested with genomically enhanced EPDs, parent

verified, coat color, horn/poll, ADG, adj YW, carcass ultrasound, and scrotal measurements. Supplement sheets will be available sale day for any information that didn't make the catalog as well as have RightChoice scores

Again, this year we will be retaining 1/3 semen interest on all the bulls. You will be buying full possession and 2/3 semen rights. We will also be retaining the right to 2 successful flushes (minimum of 8 grade 1 eggs with no cap) on any of the females we are selling.

Thank you for your interest in our program. Please feel free to contact us at any time, follow us on Facebook, or visit our website www.srsimms.com to learn more about the cattle. Visitors are always welcome to view the bulls prior to the sale.

Thank You,

Schnabel Ranch Simmentals
Tom & Meghan Schnabel,
Peyton (15), Mallory (13),
Danyelle (12), Korbryn (9)

Schnabel
Ranch Simmentals

From our family to yours - welcome and thank you for taking time to look through this offering that Schnabel Simmental's and us have put together.

This sale represents far more than a set of bulls. It reflects years of early mornings, late nights, careful decisions and deep respect for the cattle, land and generations that come before us and the ones to follow. This offering is built on hard work and the belief that doing things right still matters.

At the heart of our program is the Red Angus female. We believe that in order to earn her keep a cow needs to be sound, functional, and productive with a good disposition. One that is able to raise a calf and stay in the herd to well past ten years of age. Maternal strength is not just a trend in our program; it has been the backbone and foundation of the program since 1988 when Steph purchased her first set of registered cows from Ed Artz. From those genetics, we have strived to produce cattle that balance calving ease and growth with some focus on carcass attributes. Calving ease is the ability of a cow to give birth to a calf easily and without assistance- not just a low birthweight. If you are stuck on low birth weight then you may not find what you want here. Calving ease refers to genetics and management factors that reduce difficult births, stress on a cow/calf, labor, time, or vet costs. You will see some higher birth weight cattle in our

program, even the bulls out of first calf heifers. We expect them to be able to handle at least an 85 pound calf at birth and they can. This is due to the fact we have never selected low birth weight as the only calving ease factor. If you are searching for cattle that can perform and add value to your herd then you are in the right place.

The bulls offered here have been raised with care and intention. They are developed to be functional, durable and ready to work for you. We pay close attention to structure and longevity in our cow herd which follows through to the calf crop. We know a bull is an investment- not just for one season, but the future of your herd.

What we value just as much as good cattle are the relationships built around them.

Our customers are friends who become part of our Red Angus family. Many of you have trusted us with

your program for decades now and that trust is not something we take lightly. Thank you for the confidence you place in us and for being a part of our story and for allowing us to be a small part of your story. We invite you to study the offering, ask questions, share concerns and let us help you reach your goals with a herd bull investment from our ranch. Please view the videos on DV Auction prior to the sale or stop by our place and take a look any time you happen to be in the area. The bulls will be on display Friday, February 20th by 3pm at Hub City Livestock in Aberdeen. Join us in person or view and bid on DV February 21st at 1:00 pm. We would love to help you reach your goals with a new herdsire from the crew here at **Lazy J Bar Ranch.**

God bless you all,
John & Steph Jung,
Kale and Jacob

Here's a bull you look at and go holy smokes because he can have so much mass and capacity, while still maintaining that clean front end. He's got tree trunks for legs and still gets around. His disposition is top tier. One that we see going down the road and producing some awesome replacement females.

LOT 2

This bull is one that's hard to miss in the sale pen due to his look and stellar disposition. One that offers so much bone, footsize, and genuine power. He's the kind that balances look and style, with true functionality. Look at him on paper and he doesn't dissapoint. If you need power in a cow herd take a look.

This is an outcross pedigree for our operation, but boy did it work! 519N is the result of a flush on the dam with Jared Werning Cattle and Sumption Farms. This dude's got the pedigree to produce good females, or bulls. He's one that offers so much bone, footsize, and shape up high. He carries himself like a cat and has that clean front end that everyone wants.

If you are looking for calving ease this one definitely reads that way but he is a bull that has some of our top producing lines to back him, from the phenotype standpoint and the genotype. The maternal grandsire side goes back to one of our top revenue producing dams, Y7816. The Dividend sire is one that we are excited to get females into production. His bred replacement females are developing nice udders and have an awesome phenotype.

This just might be my favorite bull in the entire offering, actually he might be one of the best ones we have ever raised. He is very hard to fault when you study him from the ground up he is just ABSOLUTELY incredible. He is huge topped, extremely massive, with near perfect hoof and heel design. He is the definition of a curve bender with a negative BW to 103 WW and almost 165 for YW. His actual data was only 85# and smashed to scales down with and actual WW of 872# & a 129 WWR with zero creep feed. His dam did a hell of a job for her first time, I can't wait to see what her future holds. We would like to get this guy collected and use back in the herd.

This daughter is sired by Never Say Never and out of the dam of MR SR Jacked Up. She has a great side profile, she's smooth shouldered with tremendous neck extension. She will be a maternal powerhouse as her dam never misses. She has 110 WW ratio

THE FIRST OFFERING OF OPEN HEIFERS

This is the first time that we have opened up the gates to our replacement pen but we figured it was time to give it a try. These girls were taken right out of our keep pen and let me tell you I wouldn't hesitate to put them right back in there. They are sure to add genetic potential to any operation. They have all been Bangs vaccinated, EID tagged, checked open and breedable, and given their Bovi-Shield Gold VL5 FP.

I'm going to be totally honest this one hurts to see go. Genomically she is one of the very best we've ever raised and she's dang good phenotypically too. Talk about a heifer that is dual purpose. Throw a halter on her and show her then breed her or flush to the bull of your choice as the mating flexibility she has makes the bull choices virtually **ENDLESS!!!**

Rare opportunity to get your hands on a daughter of RFS Top Gun (deceased). If you are into the red genetics you know how hard it is to find outcross genetics that have great genomic value. There could be numerous mating possibilities. Phenotypically she is awesome, she glides around so smooth and free she looks like an Olympic figure skater.

Here's your chance to get your hands on some MR SR Red October genetics. Tremendous calving ease and adequate growth. She could raise the next elite red calving ease sire and pay for herself 10 fold. Don't miss out on the chance to inject these genetics into your herd as they aren't available around every corner.

Precision genomic selection tools FOR THE FUTURE of commercial beef production

Many of you have seen the unprecedented results created by the RightMate and RightChoice tools for precision matings in the beef genetics industry. Now, Top Genomics offers tools that use the same, cutting-edge technologies, but in a format that is better suited to the way most commercial herds breed cows.

With a genomic snap-shot of your commercial cow herd, it is possible to sort a group of sale bulls or AI candidates to best match your particular situation and wishes. RightBull provides substantially more insurance of success than just paging through a catalog or walking from pen to pen. Ultimately, you make the decisions from the prescribed short list based on the traits and factors you prioritize.

Additional Options

- Choosing ideal heifer bulls is great strength of the RightBull and RightMate technologies.
- Top Genomics can sort females in your herd into more similar groups making bull turn out more precise.
- Genomically sort the cow herd into desired outcome groups, then prescribe special purpose bulls.
- RightBull is also available for seedstock providers wishing to purchase genetics.

The PROCESS

- 1 Access, if genotypes are currently available, or genotype a minimum of 25% of the existing cow herd (25 head minimum in cow herds <100). This minimum percentage may differ slightly depending on group sizes and total females to mate, but the more females genotyped the more accurate the evaluation. For some this will be a decision to genotype the entire herd or at least all of the young females. The information delivered to Top Genomics must be in the form of raw genotypes and not genomic scores (please contact Allied for questions) in order to get the core information needed for RightBull.
- 2 Get permission from your seedstock provider to access to the bull genotypes and EPDs, then transfer that information along with the genotypes of the cow herd to Dr. Mahdi Saatchi at Top Genomics, LLC. If he already has those genotypes, this process is even easier.
- 3 Participate in a conversation with staff regarding your mating plans and breeding objectives so that the results can be better customized to your management practices and genetic goals.
- 4 Top Genomics will provide you a RightBull ranking and %Genomic Match for bulls in that particular offering for you to use as an important "first sort" in preparation for purchase.
- 5 Please allow 5-8 weeks from the time you collect DNA samples to expect results, but just 2 weeks for the RightBull evaluations to be completed if your cow's genotypes are already available.
